Sådan skal udtrækket læses

FMC'en gemmer kun tidspunkt og bruger for den seneste ændring af hver regel/objekt – ikke historiske versioner. Udtrækket viser derfor reglernes nuværende indhold, og hvornår de sidst blev ændret. Ændrer en bruger flere regler i ét gem, får de samme tidsstempel; de er grupperet og koblet til den nærmeste 'Save Policy'-hændelse i audit-loggen (±5 min) for at vise, hvem der stod bag.
